# Off in the Stilly Night

22

Off in the Stilly night, Ere Slumber chain has bound me, Fond Memory brings the light of other days around me

Off in the Stilly night, Ere Slumber chain has bound me, Fond Memory brings the light of other days around me

Off in the Stilly night, Ere Slumber chain has bound me, Fond Memory brings the light of other days around me

## Off in the Stilly Night.

Ere Slumber, Chain has bound me  
Fond Mem'ry brings the light  
Of other days around me

The smiles the tears  
Of Boyhood's years

The words of love then spoken  
The eyes that shone  
Now dim'd & gone

The cheerful heart now broken

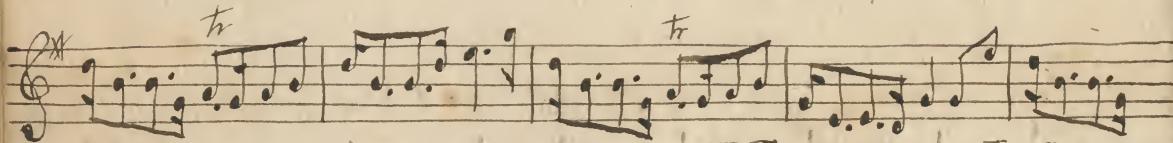

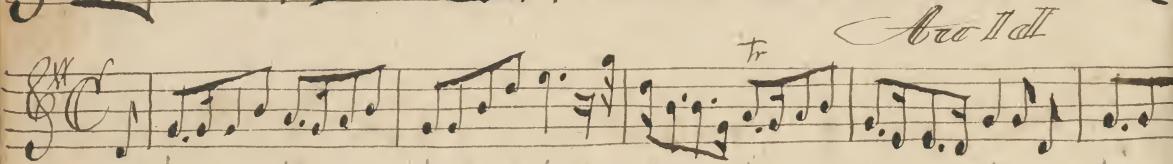

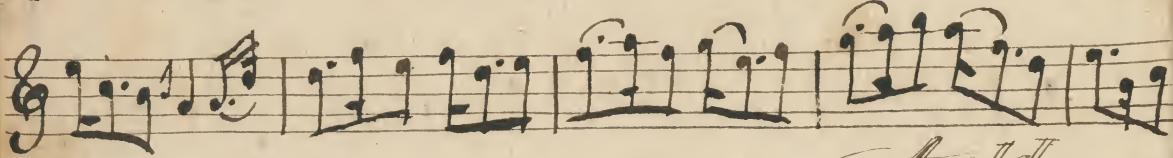

They in the Stilly night, Ere Slumber, chain has bound me  
Sad Memory brings the light, Of other days around me

When I remember all the friends so link'd together  
I see over around me all life here is winter weather  
I feel like one who stands alone

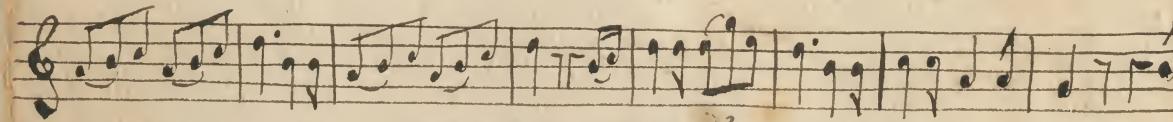

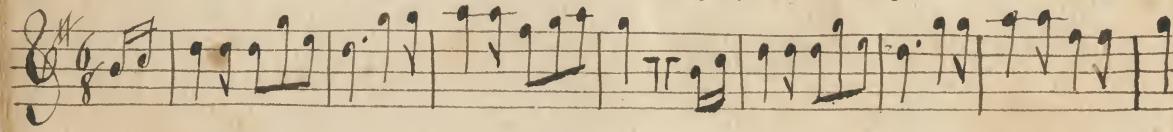

Spring brings it shall assert  
Whose light are the, When garlands dead  
and see with affection -

They in the Stilly night  
Ere Slumber, Chain has bound me  
Sad Memory brings the light  
Of other days, around me

# Flower of Dumbarton

5

Handwritten musical score for "Flower of Dumbarton" in five systems of music. The score includes various dynamics and markings such as *tr* (trill), *sf* (sforzando), and *mf* (mezzo-forte). The music is written on five-line staves with black ink on aged paper. The score begins with a treble clef, a common time signature, and a key signature of one sharp. The first system ends with a double bar line. The second system starts with a bass clef and continues in common time. The third system starts with a treble clef and continues in common time. The fourth system starts with a bass clef and continues in common time. The fifth system starts with a treble clef and continues in common time. The score concludes with a final double bar line.

Mary's Dream

Contented Cottage

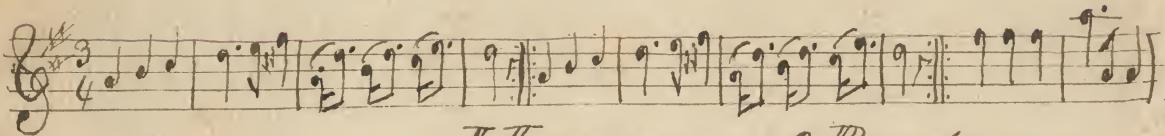

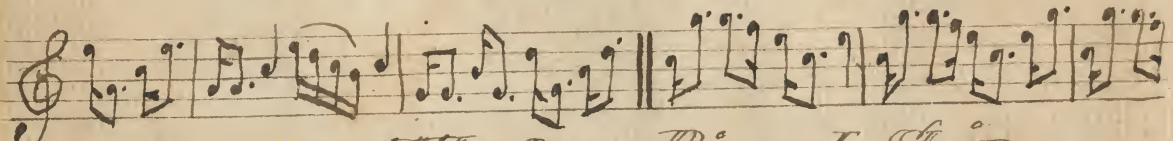

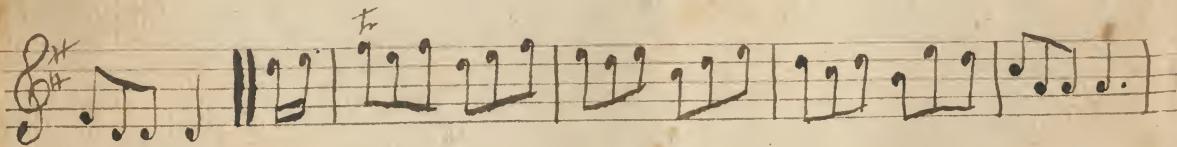

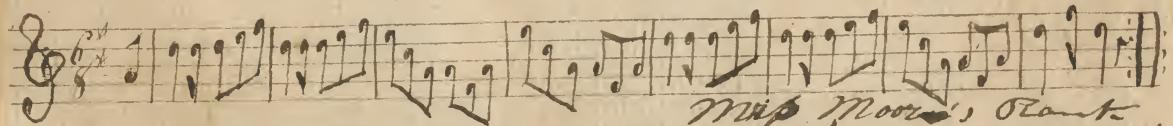

Sym.

A handwritten musical score for six staves, likely for a string quartet or similar ensemble. The music is written in common time. The staves are as follows:

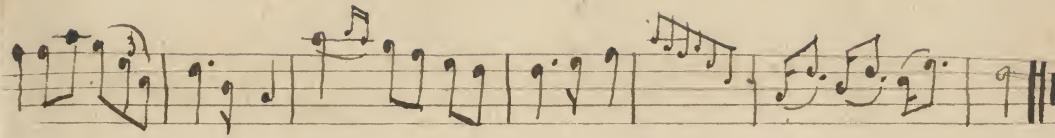

- Staff 1: Treble clef, mostly eighth-note patterns.
- Staff 2: Bass clef, mostly eighth-note patterns.
- Staff 3: Treble clef, mostly eighth-note patterns.
- Staff 4: Bass clef, mostly eighth-note patterns.
- Staff 5: Treble clef, mostly eighth-note patterns.
- Staff 6: Bass clef, mostly eighth-note patterns.

The score concludes with a repeat sign and the instruction "sym." (symphony) under the bass staff.

Handwritten musical score for "Devil's Dream" featuring 19 variations (Var. 1 through Var. 19). The score is written on six staves, each with a unique rhythmic pattern and time signature (e.g., 2/4, 3/4, 4/4). The variations are labeled as follows:

- Var. 1: The first variation is on the top staff.
- Var. 4: The fourth variation is on the second staff.
- Var. 7: The seventh variation is on the third staff.
- Var. 12: The twelfth variation is on the fourth staff.
- Var. 15: The fifteenth variation is on the fifth staff.
- Var. 19: The nineteenth variation is on the sixth staff.

Performance instructions include "D.C. 8th" (Da Capo 8th) and "D.C. 5th" (Da Capo 5th). The score concludes with the title "Devil's Dream" written across the bottom staff.

## Genl. George, S-

A handwritten musical score for a string instrument, likely cello or bass. The score is on two staves. The first staff begins with a clef, a key signature of one sharp, and a 4/4 time signature. The second staff begins with a clef, a key signature of one sharp, and a 2/4 time signature. The music consists of various note heads and stems, with some stems pointing upwards and others downwards, indicating different voices or parts within the score.

## Dickie of

A page from a handwritten musical score for a string quartet. The score is on five-line staff paper. The key signature is C major (no sharps or flats), and the time signature is common time (indicated by 'C'). The music consists of two measures of sixteenth-note patterns. The parts are labeled: Violin 1, Violin 2, Viola, and Cello. The handwriting is in black ink, and the music is written in a clear, legible style.

## Trio.

A single melodic line is written on a staff using a soprano C-clef. The music consists of a series of eighth and sixteenth note patterns. The first section ends with a double bar line and a repeat sign. The second section begins with a 'C' with a double circle, indicating a repeat of the previous section. The score is written in black ink on a light-colored background.

# The American

A handwritten musical score on a single staff. The clef is a treble clef, and the time signature is 8/8. The melody consists of a series of eighth and sixteenth notes, with a fermata over the eighth note of the first measure. The score is titled "The American" in cursive script at the end of the staff.

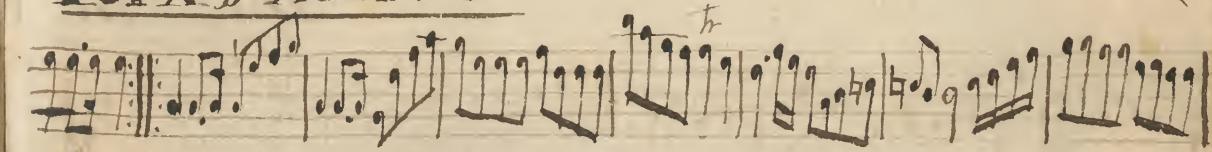

A handwritten musical score page featuring a single melodic line on a five-line staff. The music is in common time (indicated by 'C'). The notes are represented by various shapes: some are filled with dots, some are hollow with a dot in the center, and some are hollow with a cross inside. There are also several rests of different lengths. The paper is aged and shows some discoloration and faint markings.

Reduce  $x-a = \sqrt{x} - \frac{1}{2}\sqrt{a}$ . Squaring both sides -

89

Ex. 10.

$$\begin{aligned} x-a &= \sqrt{x} - \frac{1}{2}\sqrt{a} \\ x-a &= x - \sqrt{a} + \frac{a}{4} \quad \text{Transposing } x - \sqrt{a} \text{ to } a \\ \cancel{x-a} &= \cancel{a} + \frac{a}{4} \\ \cancel{a} &= a + \frac{a}{4} \\ 4\cancel{a} &= 4a + a - \cancel{a} \quad \text{Squaring both sides} \\ 16ax &= 25a \\ x &= \frac{25a}{16a} = \frac{25}{16}. \end{aligned}$$

118. Page 129 Days Algebra. Reduce  $\sqrt{5x} + \sqrt{x+2} = 2 + \sqrt{5x}$ . Squaring

Ex. 11.

$$\begin{aligned} \sqrt{5x+10} &= 2 + \sqrt{5x} \quad \text{both sides} \\ \cancel{\sqrt{5x+10}} &= \cancel{2} + \sqrt{5x} \\ 4 + 2\sqrt{5x} &= 2\sqrt{5x} + 5x \end{aligned}$$

$$\begin{aligned} 5x+10 &= 4 + 4\sqrt{5x} + 5x \quad \text{Transposing} \\ -5x &= -4 + 4\sqrt{5x} \\ 6 &= 4\sqrt{5x} \quad \text{Squaring again} \\ 16 \times 5x &= 36 \quad 80x = 36 \\ x &= \frac{36}{80} = \frac{9}{20}. \end{aligned}$$

12. Reduce  $x - ax = \frac{\sqrt{x}}{x}$

$$\begin{aligned} x^2 - ax^2 &= x \quad \text{Clearing fractions} \\ x - ax &= 1 \quad \text{Dividing again by } x \\ 1 - a &= \frac{1}{x}. \text{ This } \frac{1}{x} \text{ is the reciprocal} \\ \text{of } x; \text{ and hence, if } 1 - a = \frac{1}{x} \text{ the reciprocal} \\ \text{of } x \text{ then must be } \frac{1}{1-a} \text{ the reciprocal of } 1-a. \end{aligned}$$

Ex. 14. Reduce  $\sqrt{x} + \sqrt{a+x} = 2a$  Clearing

$$\begin{aligned} \sqrt{ax+x^2} + a + x &= 2a \quad \text{Dividing by } x \\ \sqrt{ax+x^2} + a + x &= 2a \quad \text{Multiplying by } x \\ \sqrt{ax+x^2} &= a - x \quad \text{Multiplying} \\ a - x &= a^2 - 2ax + x^2 \quad \text{Squaring both sides} \\ ax + x^2 &= a^2 - 2ax + x^2 \quad \text{Transposing} \\ -ax &= -x^2 \quad \text{Transposing} \\ +3ax &= a^2 \quad \text{Changing signs} \\ x &= \frac{a^2}{3a} = \frac{a}{3} \quad \text{Ans.} \end{aligned}$$

Ex. 15. Reduce  $\sqrt{a^2+x^2} = \frac{2a^2}{a^2+x^2}$

$$\begin{aligned} \text{Clearing fractions} \quad & \cancel{a^2+x^2} + a^2 + x^2 = 2a^2 \\ \text{Transposing} \quad & \cancel{a^2+x^2} = a^2 - x^2 \\ \text{Dividing by } x^2 \quad & a^2 + x^2 = \frac{a^2 - 2ax^2 + x^4}{x^2} \\ \text{Multiplying both sides} \quad & a^2 + x^2 = \frac{a^4 - 2a^2x^2 + x^4}{x^2} \\ \text{Clearing fractions} \quad & a^2 + x^2 = \frac{a^4 - 2a^2x^2 + x^4}{a^2 - x^2} \\ \text{Transposing & Clearing} \quad & 3a^2x^2 = a^4 - a^2x^2 \\ \text{dividing} \quad & x^2 = \frac{a^4 - a^2}{3a^2} = \frac{a^2}{3} \\ & x = a\sqrt{\frac{1}{3}}. \end{aligned}$$

Ex. 16. Reduce  $x + a = \sqrt{a^2 + x^2}$  Squaring both sides

②  $x^2 + 2ax + a^2 = a^2 + x^2 + 2x$  Transposing  $a^2$  & Dividing by  $x$

$$x + 2a = \sqrt{a^2 + x^2}$$
 Squaring both sides

$$x^2 + 2ax + a^2 = a^2 + x^2 \text{ Transposing } a^2 + x^2$$

$$\begin{aligned} 4ax &= 0 \\ x &= \frac{0}{4a} \text{ or } \frac{B^2 - A^2}{4a} \end{aligned}$$

Ex. 17. Reduce  $\sqrt{2+x} + x = \frac{4}{2-x}$

$$\begin{aligned} \text{Clearing fractions} \quad & \cancel{2+x} + x = \frac{4}{2-x} \\ \text{Transposing} \quad & 2 + 2x + \sqrt{2+x}x^2 = 4 \\ \text{Transposing again} \quad & 2x + x^2 = 4 - 4x + x^2 \\ & 6x = 4 \\ x &= \frac{4}{6} = \frac{2}{3}. \end{aligned}$$

18<sup>th</sup> Ex. Reduce  $\sqrt{x-32} = 16 - \sqrt{x}$ . Squaring both sides.

$$\begin{array}{r} x-32 = 256 - 32\sqrt{x} + x. \text{ Transf. & writing} \\ -x \quad 32 \\ 32\sqrt{x} = 288 \text{ dividing by 32} \\ \sqrt{x} = 9 \\ x = 81. \end{array}$$

~~square both sides~~

$$\begin{array}{r} x-32 = 256 - 32\sqrt{x} + x. \\ -x \quad 32 \\ 32\sqrt{x} = 288 \\ \sqrt{x} = 9 \\ x = 81. \end{array}$$

Ex. 21. Reduce  $\sqrt{6x-2} = 4\sqrt{6x-9}$

$$\begin{array}{r} \text{Clearing fractions, } \frac{\sqrt{6x-2}}{4\sqrt{6x-9}} = \frac{4\sqrt{6x-9}}{\sqrt{6x-2}} \\ \frac{4\sqrt{36x^2-72x}}{-96x+18} = \frac{4\sqrt{36x^2-64x}}{-8\sqrt{6x-12}} \end{array}$$

$$\begin{array}{r} 4\sqrt{36x^2-72x} = 4\sqrt{36x^2-64x-12} \text{ Cancelling } 4\sqrt{36x^2} \text{ on both sides} \\ -96x+18 = -8\sqrt{6x-12} \text{ Clearing all the signs, & trans. &} \\ -\sqrt{6x-12} = 2\sqrt{6x-12} \\ \frac{12}{6} = \frac{\sqrt{6x-12}}{\sqrt{6x-12}} \text{ Squaring both members,} \\ 36 = 6x: x = \frac{36}{6} = 6. \end{array}$$

Prob. 8 - pg. 134. What 2 numbers are those whose diff. is to the greater as 2:9 and the difference of whose squares is 128. Let  $2x$  = their diff. &  $9x$  = the greater number.

Then will  $7x$  = the lesser - that the product of the sum & difference of any two numbers is equal to the diff. of their squares. Hence  $(9x+7x) = 9x+7$

$$\begin{array}{r} \text{Proof. Substituting 2 in } \frac{(9x+7x)}{81x^2-49x} = \frac{9x+7}{49x} \\ 9x^2 = 18 \\ 7x^2 = 14 \text{ Numbers in } 32x^2 \end{array}$$

$$\begin{array}{r} 81x^2-49x^2 = 32x^2 \\ 81x^2-63x^2 = 49x^2 \\ 18x^2 = 49x^2 \\ 32x^2 = 128 \\ x^2 = \frac{128}{32} = 4 \\ x = \sqrt{4} = 2. \end{array}$$

The product of any number multiplied by 4, is equal to the square of twice the square root of such number. Thus  $49 \times 4 = 196$ , and twice the  $\sqrt{49} = 14^2 = 196$ .

Prob 12 Two Travellers, A & B set out to meet early  
other - A leaving the Town of C. at the same time &  
B left the Town of D. They travelled the direct road  
between C & D; and on meeting, it appears that A  
had travelled 18 miles more than B, and that A  
could have gone B's distance in 15 days &  $\frac{3}{4}$  but B  
would have been 28 days in going A's distance -

Required the distance between the Towns.

Let  $x$  = the miles A travelled

then  $x-18$  = the miles B travelled  $\frac{x-18}{15\frac{3}{4}}$  = a day's travel of A

Hence  $x : x-18 : \frac{x-18}{15\frac{3}{4}} : \frac{x}{28}$   $\frac{x}{28}$  = B's daily travel

$\frac{x^2}{28} = \frac{x^2 - 36x + 324}{15\frac{3}{4}}$  Multiplying this equation by 4 &  $\frac{3}{4}$

$4x^2 = 4x^2 - 144x + 1296$  Clearing this of fractions

$$28) 252x^2 = 448x^2 - 16128x + 145152. \text{ Dividing by 28}$$

$$9x^2 = 16x^2 - 576x + 5184 \text{ Transposing & collecting terms}$$

$$7x^2 - 576 = - 5184 \text{ Completing the square by multiplying the equation}$$

$$\frac{126x^2 - 16128x + 331776}{28} = - 145152 + \frac{331776}{28} \text{ by 4 times, the Co. eff. of the highest power}$$

$$\text{of the unknown quantity & by adding}$$

$$\text{the square of the Co. eff. of } x \text{ to}$$

$$\text{both members}$$

$$\text{have } 14x^2 = 576 + 432$$

$$\frac{432}{432}$$

$$14) \frac{1008}{98} (72 = x \text{ the distance A travelled})$$

$$\frac{98}{28} = \frac{18}{54} = \text{the distance B travelled}$$

so that 126 miles is the distance between C & D.

Another rule for Completing the square of  
a binomial.

If the highest power of the unknown quantity  
has a coefficient equal to only one multiply the  
equation by 4 & add to both sides the square  
of the coefficient of the lowest power if the Co. of  
the highest be 2-3-4 &c. Multiply the equation  
by 8-12-16 &c & add the square of the Coef. on the  
first power as before. The last strait will leave the  
unknown quantity simply isolated.

Ex. 7. Ex. 147. Reduce  $\frac{x+4}{3} - \frac{7-x}{x-3} = \frac{4x+7}{9} - 1$  Clear fractions

$9x^2 + 9x - 108 + 27x - 18 = 12x^2 - 15x - 63$  Cross multiplying the

$3x^2 - 78x = -315$  Dividing by 3

$x^2 - 26x = -105$  Comp. L. by adding  $\frac{1}{4}$  to each side

$x^2 - 26x + 169 = 169 - 105 = 64$

$x = 13 \pm \sqrt{64} = +8 = 21$   
or  $13 - 8 = -5$

Ex. 8. Reduce  $\frac{x^3 - 10x^2 + 1}{x^2 - 6x + 9} = x - 3$  Clear fractions

$x^2 - 9x^2 + 27x - 27 = x^3 - x^2 - 11x + 1$   $x^3$  is balanced

$x^2 + 27x = 27$  Cross & unity terms

$4x^2 + 108x + 729 = 112 + 729 = 841$  Comp. L. by root

$2x + 27 = \sqrt{841} = 29$

$\frac{43}{43} \frac{441}{441} \quad 2x = -27 + 29 = 2$   
 $x = \frac{29 - 27}{2} = \frac{2}{2} = 1$  or  $29 + 27 = \frac{56}{2} = 28$

Ex. 3. Reduce  $4x - \frac{14 - x}{x+1} = 14 = \frac{4x^2 + 4x - 14 + x}{x^2 - 9x} = 14x + 14$

$x^2 - 9x = 7$  Comp. L. by root

$x^2 - 9x + \frac{81}{64} = 7 + \frac{81}{64} = \frac{529}{64}$

$x = \frac{9}{8} \pm \sqrt{\frac{529}{64}} = \frac{23+9}{8} = \frac{32}{8} = 4$

or  $\frac{23-9}{8} = \frac{14}{8} = \frac{7}{4}$  or  $1\frac{3}{4}$ .

Ex. 14. Reduce

(2)  $2\sqrt[3]{x^2 + 3\sqrt{x}} = 2$  divided by 2 &

$x^2 + 3\sqrt{x} + \frac{9}{16} = 1 + \frac{9}{16}$  Comp. L. by root

$x^2 = -\frac{3}{4} + \sqrt{1 + \frac{9}{16}}$  Comp. L. by root

$x = \left(-\frac{3}{4} + \sqrt{1 + \frac{9}{16}}\right)^3$  Involving both sides

The value of the quantity under the radical sign is  $\sqrt[3]{\frac{25}{16}} = \frac{5}{4}$ ; and the sum of  $\frac{5}{4} - \frac{3}{4}$  is  $\frac{2}{4}$ , the cube of which is  $\frac{8}{64}$  or  $\frac{1}{8}$  the value of  $x$ .

Ex 10. Reduce  $\frac{3x}{x+2} - \frac{x-1}{6} = x-9$  Clearing fractions  
 $18x - x^2 - x + 2 = 6x^2 - 42x - 108$ . Transf & uniting like terms  
 $7x^2 - 59x = 110$

$196x^2 - 1652x + 3481 = 3080 + 3481$  Comp. like by mult by 28  
 $14x = 59 \pm \sqrt{1561} = 81$  Ext. root  
 $x = \frac{81}{14} \div 14 = 10$  Ans.

Ex 11. Reduce  $\frac{x}{a} + \frac{a}{x} = \frac{2}{a}$  Clear fractions  
a)  $ax^2 + a^2 = 2ax$  Dividing by a  
 $x^2 + a^2 = 2x$  Transf & unit  
 $x^2 - 2x = -a^2$  Comp. & square  
 $x^2 - 2x + 1 = 1 - a^2$  Ext. root  
 $x = 1 \pm \sqrt{1 - a^2}$ .

Ex 9. Reduce  $\frac{6}{x+1} + \frac{2}{x} = 3$ . Clear fractions  
 $6x + 2x + 2 = 3x^2 + 3x$  Transf & unit  
 $3x^2 - 5x = -2$  mult by 12 & add. square  
 $36x^2 - 60x + 25 = 24 + 25 = 49$  of coefft - 5  
 $6x = 5 \pm \sqrt{49} = 7$  Ext. root  
 $x = \frac{7}{12} \div 6 = 2$ . Ans.

Ex 18. Reduce  $3x^2 - 2x^2 = 8$

$3x^2 - 2x^2 + 4 = 96 + 4$  Comp. & square  
 $6x^2 = 2 \pm \sqrt{96 + 4} = 10$  Ext. root  
 $6x^2 = \frac{10}{12}$   
 $x^2 = \frac{5}{12}$  12. omit the multiplications transpose & change all the signs - and  
 $x = \sqrt{\frac{5}{12}} = \sqrt{\frac{5}{6}}$

Ex. 19. Reduce  $2(1+x-x^2) - \sqrt{1+x-x^2} = -\frac{1}{3}$ .

$x^2 - x + \frac{1}{4} = (\sqrt{x^2 - x + \frac{1}{4}}) = 1 + \frac{1}{4}$  complete square  
 $x = \frac{1}{2} + \sqrt{1 + \frac{1}{4} + \frac{1}{4}} = \frac{1}{2} \sqrt{4} = \frac{1}{2}$  Ext. root.  $1 + \frac{1}{4} = \frac{5}{4} = \frac{25}{16}$   $\frac{4}{16} = \frac{1}{4}$   
 $x = \frac{1}{2} + \sqrt{\frac{25}{16}} = \frac{1}{2} \sqrt{49} = \frac{1}{2} \cdot 7 = \frac{7}{2}$  Ext. this is not right

See page 47.

Ex 20.  $\sqrt[3]{x^2 - a^3} = \frac{x - b}{x + b}$  Cube both sides <sup>55</sup>

$$\begin{array}{r} x^2 - a^3 \\ - bx + b^2 \\ \hline x^2 - 2bx + b^2 \\ x - b \\ \hline x^2 - 2bx + b^2 \\ - bx^2 + 2bx - b^3 \\ \hline \end{array}$$

$x^3 + a^3 = x^3 - 3bx^2 + 3b^2x + b^3$  Expung the  $x^3$  cubes

36)  $3bx^2 - 3b^2x = a^3 - b^3$  Change all the signs

$$x^2 - bx = \frac{a^3 - b^3}{3b}$$
 transfer  $a^3 + b^3$  and
$$x^2 - bx + \frac{b^2}{4} = \frac{a^3 - b^3}{3b} + \frac{b^2}{4}$$
 Divide by 3b Comp Square
$$x = \frac{b}{2} + \sqrt{\frac{a^3 - b^3}{3b} + \frac{b^2}{4}}$$
 Extract
$$\sqrt{\frac{16a^3 - 4b^3 + 3b^3}{12b}} = \frac{4a^3 - b^3}{12b}$$

Ex. 21. Reduce  $\frac{\sqrt{4x+2}}{4+\sqrt{x}} = \frac{4-\sqrt{x}}{\sqrt{x}}$

$$\frac{\sqrt{4x+2}}{\sqrt{x}} \cdot \frac{4+\sqrt{x}}{4+\sqrt{x}} = \frac{(4-\sqrt{x})}{\sqrt{x}} \cdot \frac{(4+\sqrt{x})}{(4+\sqrt{x})}$$

$$\sqrt{4x^2+2x} = 2x + \sqrt{2x} = 16 - x \text{ transfer } +4\sqrt{x} + x$$

$$\frac{3x + \sqrt{2x} - 16}{3x + \sqrt{2x}} \cdot \frac{16 - 4\sqrt{x}}{16 - 4\sqrt{x}} = x$$

$$\frac{9x^2 + 3x\sqrt{2x}}{9x^2 + 3x\sqrt{2x}}$$

$$+ 3x\sqrt{2x} + 2x$$

$$9x^2 + 6x\sqrt{2x} + 2x = 256 \text{ Only root!}$$

$$3x + x = 16$$

$$\text{then } 4x = 16$$

$$x = 16 \div 4 = 4$$

Not quite satisfactory

21st. Try again

6x 21 - again.  $\frac{\sqrt{4x+2}}{\sqrt{x}} \cdot \frac{4-\sqrt{x}}{4-\sqrt{x}}$

$$\begin{array}{l} \sqrt{4x^2 + 2x} = 16x + \sqrt{2x} \\ 2x + \sqrt{2x} = 16x - 4 \\ 2x + \sqrt{2x} = 16x - 4 \\ 2x + \sqrt{2x} + 4 = 16x - 4 \\ 6x^2 + 4x + 4 = 16x^2 - 16x + 4 \\ 6x^2 + 4x = 16x^2 - 16x \\ 4x = 16x - 4 \\ x = 4 \end{array}$$

$$\begin{array}{l} \sqrt{4x^2 + 2x} = 16 - x \\ \sqrt{4x^2} = 16 - x \\ 2x + \sqrt{2x} = 16 - x \\ 2x + \sqrt{2x} = 16 - 4 \\ 2x + \sqrt{2x} = 12 \\ 2x + \sqrt{2x} + 4 = 12 + 4 \\ 6x^2 + 4x + 4 = 16x^2 - 16x + 16 \\ 6x^2 + 4x = 16x^2 - 16x + 12 \\ 4x = 16x - 12 \\ x = 4 \end{array}$$

$$\begin{array}{l} 3x^2 + 4x^2 - 36x^2 + 100x + 16 = 784 \\ 16x^2 = 100x + 16 \\ x = 100 - 16 = 84 = 28 \\ x = 18 - 4 = 14 = 4 \end{array}$$

Ex. 15. Reduce  $\frac{1}{2}x - \frac{1}{3}\sqrt{x} = 22\frac{1}{2}$  Dividing the eqn. by  $\frac{1}{2}$   
 $\frac{1}{2}x + \frac{1}{2}$  are the roots  
 of this square.

Shorter method.  
 $\frac{1}{2}x - \frac{1}{3}\sqrt{x} = 22\frac{1}{2}$  Clear fraction  
 $18x - 12\sqrt{x} = 798$ , dividg. by 6  
 $3x - 2\sqrt{x} = 133$  Comp. square

$$36x - 24\sqrt{x} + 4 = 41596 = 1600$$

$$6\sqrt{x} = 2 \pm \sqrt{1600} = 40 \pm 2 = 42$$

$$\sqrt{x} = 42 \div 6 = 7$$

$$x = 7^2 = 49.$$

$$x - \frac{2}{3}\sqrt{x} = 44\frac{1}{3} \text{ a } \frac{1}{2}$$

$$x - \frac{2}{3}\sqrt{x} + \frac{4}{9} = 44\frac{1}{3} + \frac{4}{9} \text{ Complete square}$$

$$\sqrt{x} = \frac{2}{3} + \sqrt{44\frac{1}{3} + \frac{4}{9}} - \text{Ex. 7}$$

$$x = \frac{2}{3} + \sqrt{44\frac{1}{3} + \frac{4}{9}}^2 \quad 44\frac{1}{3} = 44\frac{3}{9}$$

$$\frac{4}{9} = \frac{1}{9}$$

$$44\frac{4}{9} = 400 + \text{the}$$

square root of which  $20$  and the  $\frac{3}{9}$  last  
 term has  $\frac{1}{3}$  which added to  $\frac{20}{3} = \frac{21}{3}$  and  
 the square of this is  $\frac{441}{9}$  making

$$x = 49.$$

Ex. 16. Reduce  $2x^2 - x + 96 = 99$ , transposing  $99 - 96 = 3$   
 $16x^2 - 8x^2 + 1 = 1 + 24$  Complete square by multg. by 8 and 3 of  
 $4x^2 = 1 + \sqrt{1 + 24} = 25 = 5$ . Ex. 7 root.  
 $x^2 = 1 + 5 = 6$   
 $x = \sqrt{\frac{6}{4}} = \pm \sqrt{6}.$

Ex. 17. Reduce  $(10+x)^{\frac{1}{2}} - (10+x)^{\frac{1}{4}} = 2$ . Reduce it a common index &  
 $\sqrt{10+x} - \sqrt[4]{10+x} + \frac{1}{4} = 2 + \frac{1}{4}$  Complete square  
 Then  $\sqrt{10+x} = \frac{1}{2}\sqrt{2 + \frac{1}{4}} = \sqrt{\frac{9}{4}} = \frac{3}{2} + \frac{1}{2} = \frac{4}{2} = 2$ . Squaring both sides  
 ~~$10+x^2 = 4$ .~~  
 $x = 4^2 = 16 - 10 = 6$ . Ans.

The  $\frac{1}{4}$  root of  $10+x$  subtracted from the square root of the same  
 quantity leaves the  $\frac{1}{4}$  root of that quantity: The  $\sqrt[4]{10+x} = 2$ .  
 $10+x$  therefore is equal to  $2^4 = 16$  and  $x = 16 - 10 = 6$ . Ans.

Ex. 18. Reduce  $3x^2 - 2x^{\frac{1}{2}} = 8$

$$36x^2 - 24 + 4 = 96 + 4 = 100$$

$$6x^{\frac{1}{2}} = 2 \pm \sqrt{100} = 10 + 2 = 12 \quad \text{Ex. 7 root.}$$

$$x^{\frac{1}{2}} = \sqrt{\frac{12}{6}} = \sqrt{2}.$$

Ex. 22. Reduce  $x^{\frac{3}{5}} + x^{\frac{3}{5}} = 756$

$$x^{\frac{3}{5}} + x^{\frac{3}{5}} + \frac{1}{4} = 756 + \frac{1}{4} \quad \text{Clear of fractions}$$
$$x^{\frac{3}{5}} = \frac{1}{4} + \sqrt{756 + \frac{1}{4}} = \frac{1}{4} + \sqrt{756 + \frac{1}{4}} \quad \text{Extract Root}$$

Dividing -  $x^{\frac{3}{5}} = \sqrt{27} = 3$

Dividing  $x^{\frac{2}{5}} = 9$

$$\frac{2 \times 3}{x^{\frac{3}{5}}} = \frac{2}{x^{\frac{3}{5}}} = 27 \quad \text{Ans.}$$

$$\frac{3025}{25} \sqrt{27} \div \sqrt{4} = 27 + \frac{1}{4}$$

$$\frac{105}{25} \sqrt{27}$$

$$\left\{ \begin{array}{l} x^{\frac{3}{5}} = 27 \quad \text{Ans.} \\ x^{\frac{2}{5}} = \frac{6}{27} = 729 = 27 \times 27 \\ \hline 756 \end{array} \right.$$

Ex. 19. Reduce  $2(1+x-\frac{1}{4}) - \sqrt{1+x-x^2} = -\frac{1}{3}$ . Squaring L.H.S. - R.H.S.

Mult by 2.  $2+2x-2x^2$  & subtracting it

Subtracting  $\frac{+1+x-\frac{1}{4}}{1+x-x^2} = -\frac{1}{3}$  See again next

Change sign & transpose  $x^2 - x = -\frac{1}{3} + \frac{1}{4}$  page.

Clear of L.H.S.  $x^2 - x + \frac{1}{4} = \sqrt{1+\frac{1}{4}-\frac{1}{3}} = \frac{5}{4} - \frac{1}{3}$

Eq't next.  $x = \frac{1}{2} + \frac{1}{6}\sqrt{41}$   $\frac{45-4-\sqrt{41}}{36} = \frac{1}{6}\sqrt{41}$

It is not sufficient why  $-\frac{1}{3}$  should not be changed to  $+\frac{1}{3}$ ; nor how the above value of  $x$  can be found without subtracting  $-\frac{1}{3}$  from  $1+\frac{1}{4}$ .

Ex. 23. Reduce  $\sqrt{2x+1} + 2\sqrt{x} = \frac{21}{\sqrt{2x+1}}$ . Clear of fractions.

$$2x+1 + 2\sqrt{2x+1} + 2\sqrt{x} = 21. \text{ Transf. } 2x+1$$

$$2\sqrt{2x+1} + 2\sqrt{x} = 20-2x$$

$$\sqrt{8x^2+24x} = 20-2x \quad \text{Square both sides.}$$

$$\frac{400-40x}{-40x+4x^2}$$

$$8x^2+4x = 400-80x+4x^2 \quad \text{Clear of fractions.}$$

$$4x^2+84x = 400 \quad \text{Dividing by 4.}$$

$$x^2+21x = 100 \quad \text{Compleat Square.}$$

$$x^2+21x+100.25 = 100+\frac{100.25}{16}$$

$$x = -10.5 \pm \sqrt{10.25} \quad \frac{210.25(14.5-10.5)}{14.5-10.5} = +4.$$

$$\frac{+14.5}{-25}$$

Ex. 29. Reduce  $(x-5)^3 - 3(x-5)^{\frac{1}{2}} = 40$  Completing the square

$$\frac{4}{4}(x-5)^3 - 12(x-5)^{\frac{1}{2}} + 9 = 160 + 9 \quad \text{Extract root.}$$

$$2\sqrt{x-5} = 3 \pm \sqrt{169} = 13$$

$$2\sqrt{x-5} = 16$$

$$\sqrt{x-5} = 16 \div 2 = 8 \quad \text{Dividing both sides}$$

$$x-5 = 64$$

$$x = \sqrt{64} + 5 = 4 + 5 = 9.$$

Ex. 30. Reduce  $x + \sqrt{x+6} = 2 + 3\sqrt{x+6}$  Transposing  $2 + \sqrt{x+6}$ .

$$x - 2 = 2\sqrt{x+6} \quad \text{square both sides}$$

$$x^2 - 4x + 4 = 4x + 24$$

$$x^2 - 8x = 20 \quad \text{Completing square}$$

$$x^2 - 8x + 16 = 20 + 16 = 36$$

$$x = \sqrt{36} = 6 = 10.$$

26 Prob 10-150

A Gent. bought a number of pieces of Cloth for  $\frac{675}{x}$  dollars, which he sold again at 48 dollars a piece, & gained by the last gain as much as one piece cost him.

What was the number of pieces?

Let  $x$  = the number of pieces.

Then  $\frac{675}{x}$  = the price per piece at which the pieces were bought -  
and  $48x$  = what all pieces were sold for - By the conditions of the problem - all the pieces were sold for as much more than they cost, as one piece cost. Hence

$$48x - \frac{675}{x} = \frac{675}{x}$$

$$48x^2 - 675x = \frac{675}{x} \text{ Completing the square}$$

$$192x^2 - 675x - 675 = 0$$

$$\begin{array}{r} 96 \\ 432 \\ 48 \\ \hline 921 \end{array} \quad \begin{array}{r} 1350 \\ 6075 \\ 675 \\ \hline 455625 \end{array} \quad \begin{array}{r} 3375 \\ 4725 \\ 4050 \\ \hline 45625 \end{array}$$

$6x^2 - 129600x + 675^2 = 129600x + 455625$

$$186 \boxed{1116} \quad \boxed{585225} \boxed{765}$$

$$146 \boxed{952} \quad \boxed{876}$$

$$1525 \boxed{7625} \quad \boxed{7625}$$

$$96x = 675 + 765$$

$$x = \frac{1440}{96} = 15 \text{ the number of pieces. Ans.}$$

Prob 15. Several Gent. ran up a bill to 175<sup>10</sup>.  
When 2 of them having absquatulated - the bill was paid by the others: Each one contributing ten dollars more, than would have been his share, had the bill been paid by the whole Comp. What was the number of the Comp. at first? Let  $x$  = the number  $175 + 10 = \frac{175}{x-2}$

$$175x - 350 + 10x^2 - 20x = 175x \text{ Expenses } 175x \text{ The } x^2 - 2x = 350 \text{ transposed}$$

$$x^2 - 2x + 1 = 351 + 1$$

$$x = 1 + 18 = 6 + 1 = 7. \text{ the n. Comp. at first}$$

Prob. 14. A Gent. bought a certain number of Oxen for 80 Guineas. If he had bought 4 more for the same money, he would have paid one Guinea less for each. What number did he buy? Let  $x$  = the number

Then  $\frac{80}{x}$  = the price of each: But  $\frac{80}{x+4} + 1 = \frac{80}{x}$

$$\begin{aligned} \text{Expng } 80x - & 80x + x^2 + 4x = 80x + 320 \\ & x^2 + 4x = 320 \\ & x^2 + 4x + 4 = 324 \quad \text{Comple. Squre} \\ & x = 2 + \sqrt{324} \quad 18 - 2 = 16. \text{ Ans.} \\ & \frac{28}{28} \frac{224}{224} \end{aligned}$$

Prob. 15. A Gent. bought two pieces of Cloth - the finer of which cost 4 $\frac{1}{2}$  a yd more than the other. The finer piece cost 18 $\frac{1}{2}$  L, but the coarser one which was 2 yds longer than the finer cost only 16 L. How many yds were there in each piece? What was the price of a yd of each?

Let  $x$  = No. yds of the finer - then  $x+2$  = No. yds of the coarser

And  $\frac{18}{x} + \frac{16}{x+2}$  will equal the price of a yd of each - If each of these fractions be severally multiplied by their respective denominators, their products will be equal to the cost of both pieces. But  $\frac{18x}{x}$  makes  $x$  equal to 18; whereas  $\frac{16x+32}{x+2}$  makes  $x$  equal to 16 $\frac{1}{2}$

$$\begin{aligned} \text{Then } \frac{18x}{x} + \frac{16x+32}{x+2} + 2 &= 2x. \quad \text{Cleaning fractions} \\ 18x^2 + 36x + 16x^2 + 32x + 2x^2 + 4x &= 2x^3 + 4x^2 \quad \text{Dividing by } x \text{ and} \\ 2x^2 - 32x - 72 &= 0 \quad \text{having 1 & uniting} \\ x^2 - 16x - 36 &= 0 \quad \text{compl. Squre} \\ x^2 - 16x + 64 &= 36 + 64 = 100 \\ x = 8 \pm \sqrt{100} &= 10 \pm 8 = 18 \quad \text{No. yds of finer - the} \\ 20 - 2 & \text{coarse} \end{aligned}$$

Ex. 10. There are two numbers whose product is 135 and the diff. of their squares, is to the square of their diff. as 4:1. What are the numbers?

Let  $x$  &  $y$  be the numbers.

$$\begin{aligned}
 1. \quad & xy = 135 \\
 2. \quad & x^2 - y^2 : x - y :: 4 : 1 \\
 3. \quad \text{Expanding} \quad & x^2 - y^2 : x^2 - 2xy + y^2 :: 4 : 1 \\
 \text{Subtract 4 consequents} \quad & 2xy - 2y^2 : x^2 - y^2 :: 3 : 1 \\
 5. \quad \text{Dividing by } x - y \quad & 2y : x - y :: 3 : 1 \\
 6. \quad \text{Multipl. Ext & mean} \quad & 2y = 3x - 3y \\
 7. \quad \text{Transf.} \quad & 5y = 3x \\
 8. \quad \text{Given } xy = 135 \quad & x = \frac{5y}{3} \\
 9. \quad \text{Making 2 last equal} \quad & x = \frac{135}{y} \\
 10. \quad \text{Subst. 9 in the last.} \quad & \frac{135}{y} = \frac{5y}{3} = 5y^2 = 405 \\
 & y^2 = 405 \div 5 = 81 \\
 & y = \sqrt{81} = 9. \text{ Y.} \\
 & x = \frac{135}{9} = 15. \text{ X.}
 \end{aligned}$$

Prob. 13. In a mixture of rum & brandy, the diff. between the quantities, is to the quantity of brandy, as 100 is to the number of Gall. of rum; & the same diff. is to the quantity of rum, as 4 to the number of gall. of brandy.

$$\begin{aligned}
 1. \quad & \text{How many Gallons, are there of each?} \\
 2. \quad & \text{Let } x \text{ & } y \text{ represent the quantities. Then by the conditions} \\
 3. \quad & x - y : y :: 100 : x \text{ by invert. the means. } x - y : 100 :: y : x \\
 4. \quad & x - y : x :: 4 : y \text{ by invert. extremes. } 4 : x :: y : x \\
 5. \quad & x - y : 100 :: y : x \\
 6. \quad & x^2 - y^2 = 400 \text{ Multipl. Ext & mean.} \\
 7. \quad & x - y = 20 \text{ Ext. not} \\
 8. \quad & x = 20 + y \\
 9. \quad & \text{Subst. } 20 + y \text{ in the 4th proportion } 4 : 20 :: y : 20 + y \\
 10. \quad & \frac{80 + 4y}{80} = \frac{20 + y}{16} \text{ Subst. } 5 \text{ in line of } y \text{ in the 8th equation. } x = 20 + 5 \\
 11. \quad & y = 5 = \text{the brandy} \quad x = 25 \text{ rum}
 \end{aligned}$$

Prob. 16 There are two numbers, which are to 23  
each other, in the duplicate ratio of 4 to 3; and 24  
is a mean proportional between them. What  
are the numbers? Let  $x$  &  $y$  represent the numbers.

The  $x:y::4^2:3^2::16:9$  Multiplying Extremes & means,  
and  $x:24::24:y$ . Subst. the value of  $x$  in the 2<sup>o</sup> proportion

$$x = 16y$$

$$\frac{16y}{9}:24::24:y$$

$$\frac{16y^2}{9} = 576 \text{ clearing fractions}$$

$$16y^2 = 5184$$

$$y^2 = 5184 \div 16 = 324$$

$$y = \sqrt{324} = 18 \text{ and of course } x = 576 \div 18 = 32.$$

2<sup>o</sup> There are 4 numbers in Geometrical progression, the  
second of which is less than the 4<sup>o</sup> by 24 and the sum of the  
extremes is to the sum of the means as 7 to 3. What are the numbers?  
Let  $y$  = The 1<sup>st</sup> term &  $y+16$  = the ratio - Then, by Art. 436

Since  $(y:y+16):y^2:y^3$  is to  $y:y^2:y^3:y^4$  as sum of extremes to sum of means, or  $7:3$

1.  $y:y::y^2:y^3$  sum of extremes to sum of means as  $7:3$

2.  $25+y:y^2+y^3::y^2:y^3$  similarly consequents from antecedents

3.  $25-y:y^2+y^3::y^2:y^3$  similarly consequents again

4.  $25-2y^2-y:y^3:y^4::1:3$  subtracting again

5.  $75-6y^2-3y = y^2+y$  Multiplying extremes & means

6.  $7y^2+4y = 75$  Transposing & uniting terms

28

$\frac{600}{150}$  Complete Square

$$196y^2+112y+16 = 2100+16$$

$$14y = -4 \pm \sqrt{2116} = 46-4 = 42$$

And  $y = 42 \div 14 = 3$ . Substituting 3 in lieu of  $y$  in the 3<sup>o</sup> proportion

$$1:3::3^2:3^3::9:27$$

1.3.9.27 The numbers sought.

Last problem in  
Geometrical progression.

74 Prob. 19 - Aug 152. A Merchant bought 54 gallons of Madeira wine, & a quantity of Zinoriffe. For the Madeira he paid  $\frac{1}{2}$  as many shillings by the gallon, as there were gallons of the Zinoriffe, & for the Zinoriffe, he paid 4/- a gallon less. He sold the mixture for 10/- a gallon, & lost 28 pounds, 16 shillings by his bargain. Required the price of the Madeira, & the number of gallons of Zinoriffe.

Let  $x$  = the number of gall. of Zinoriffe - then  $\frac{x}{2}$  will represent the price of a gall. of Madeira: and this multiplied by 54 will equal the cost of the Madeira =  $\frac{54x}{2} = 27x$

And  $\frac{x}{2} - 4$ , will represent the price of a gall. of Zinoriffe; which multiplied by  $x$  will equal the cost of the Zinoriffe.  $\frac{x}{2} - 4 \times \text{by } x = \frac{x^2}{2} - 4x$

$$\text{Whole cost} = \frac{x^2}{2} - 4x + 23x$$

But the whole quantity was sold at 10/- a gallon  
Whole quantity =  $54 + \frac{x}{2} \times \text{by } 10$  and the loss 28.16

$$\text{added} = \frac{540 + 10x}{1116 + 10x} \text{ Shillings} = \frac{x^2 + 23x}{2} \text{ Transposing & uniting}$$

$$\frac{x^2 + 23x}{2} = 10x + 1116$$

$$x^2 + 46x = 20x + 2232$$

$$x^2 + 26x = 2232$$

$$x^2 + 26x + 169 = 2232 + 169$$

$$x = -13 \pm \sqrt{2401} (49 - 13 = 36 \text{ the value of } x) \quad \frac{36}{2} = \text{the}$$

$$\frac{16}{89} \left[ \begin{array}{r} 801 \\ 801 \end{array} \right] \text{ price of a gall. Madeira} \\ x = 14 \text{ shillings - of a gall. Zinoriffe}$$

Prob. 20. page 152.

75

If the square of a certain Number be taken from 40, & the square root of this difference be increased by 10, & the sum be multiplied by 2, & the product divided by the number itself, the quotient will be 4. What is the number? Let  $x$  = the number. Then by the condition,  $\frac{2\sqrt{40-x^2}+20}{x} = 4$

$$2\sqrt{40-x^2}+20=4x \quad \text{Transposing 20 to} \\ \text{Dividing by 2}$$

$$\sqrt{40-x^2}=2x-10 \quad \text{Squaring both sides,}$$

$$40-x^2=4x^2-40x+100 \quad \text{Transf/ & Writing} \\ 5) 5x^2-40x=-60 \quad \text{Dividing by 5}$$

$$x^2-8x=12 \quad \text{Completing square}$$

$$x^2-8x+16=-12+16=+4$$

$$x=4 \pm \sqrt{4}=2+4=6.$$

22. Two casks of wine were bought for \$58 Dollars one of which contained 5 gallons more than the other & the price by the gallon, was \$2 less than  $\frac{1}{3}$  of the number of gallons in the smaller cask. How many gallons were there in each cask, & what the price per Gallon?

Let  $x+5$  = the number gall in the larger cask. &  $x$  = the smaller. Then  $\frac{x}{3}-2$  = the price of a gallon; & this multiplied into  $x+5$  & into  $x$  produces  $\frac{2x^2+5x}{3}-4x-10$  and this = \$58.

$$\begin{aligned} \text{The greater cask} \quad & \left\{ \begin{aligned} \frac{2x^2+5x}{3}-4x-10 & = 58 \quad \text{Clearing, factoring - Transf/} \\ 6x^2+5x-12x-30 & = 174 \quad \text{Dividing terms} \\ 6x^2-7x-30 & = 174 \\ 6x^2-7x-102 & = 0 \quad \text{Completing square} \\ (3x+17)(2x-6) & = 0 \\ 3x+17 & = 0 \quad \text{or} \quad 2x-6 = 0 \\ 3x & = -17 \quad \text{or} \quad 2x = 6 \\ x & = -\frac{17}{3} \quad \text{or} \quad x = 3 \end{aligned} \right. \\ \text{The other} & = 12 \\ \frac{12}{3}-2 & = 8 \text{ do} \\ \text{a gallon} & \left\{ \begin{aligned} x & = 144 \div 12 = 12 \\ x & = 12 \end{aligned} \right. \end{aligned}$$

16 Prob. 23. In a parcel which contains, 24 coins of Silver & Copper; each silver coin is worth as many cents as there are copper coins; and each copper copper coin is worth as many cents, as there are silver coins: and the whole are worth \$2.18—How many are there of each?

$$\begin{aligned}
 \text{If } x = \text{Silver coin} & \quad 24 - x \text{ copper} \\
 24 - x = \text{the copper} & \quad \boxed{24x - x^2 = \text{the value of sil. coin}} \\
 & \quad 24x - x^2 = \text{also, the value of the cop. coin} \\
 & \quad 48x - 2x^2 = 216 \text{ Cents signs} \\
 2) 2x^2 - 48x = -216 & \quad \text{transf. to} \\
 x^2 - 24x = -108 & \quad \text{Completing square} \\
 x^2 - 24x + 144 = 432 & \quad \boxed{4x^2 - 96x + 576 = 432} \\
 x = 24 \pm 12 & \quad \sqrt{144} \text{ Ext. root} \\
 x = 36 \div 2 = 18 \text{ Sil. & 6 Cop. coin} & \quad \boxed{432}
 \end{aligned}$$

Prob 24 - Pearson bought a certain number of open for 80 Guineas. If he had bought 4 more for the same money, he would have paid a guinea a head less. What was the number?

Let  $x$  = the number. By the conditions

$$\begin{aligned}
 \frac{80}{x+4} = \frac{80}{x} - 1 & \quad \text{Clearing fractions} \\
 80x = 80x + 820 - x^2 + 4x & \quad \text{Transf. to & collect terms} \\
 -x^2 + 84x + 820 = 80x & \quad \text{Changing all the signs} \\
 x^2 - 4x = 320 & \quad \text{Completing square} \\
 x^2 - 4x + 4 = 320 + 4 & \quad \boxed{x^2 - 4x + 4 = 324} \\
 x = 2 \pm \sqrt{324} / 18 & \quad \boxed{x = 2 \pm 18} \\
 x = 2 \pm 18 = +16 & \quad \text{this is the right value of } x \\
 \text{at } -16 & \quad \text{at } -16
 \end{aligned}$$

Prob. 25 - page 164 There is a certain number consisting of 2 digits. The left hand digit is equal to 3 times the right hand digit, and if 12 be subtracted from the number itself, the remainder will be equal to the square of the left hand digit. What is the number?

Let  $x$  = the left hand digit, &  $y$  the right hand digit. Note as the local value of figures increases in a ten fold ratio from right to left - the number required =  $10x + y$

By the conditions of the problem -  $x = 3y - 1$

$$\text{and } 10x + y - 12 = x^2 - 2$$

$$\text{add 9th 2 Eq. } - 10x + 4y - 12 = x^2 + x - 3$$

$$\text{Multipl. 2 by 4 } - 40x + 4y - 48 = 4x^2 - 4$$

$$\text{Sub 3rd from 6th } - 36x - 36 = 3x^2 - x - 5$$

$$\text{Transf. 3rd & multiplying } 3x^2 - 31x = -36 \quad 6$$

$$\text{Completing square } 36x^2 - 372x + 961 = 43^2 + 961$$

$$\text{Eq't root } \frac{6x}{23} = 31 + 23 \div 6 \quad \left\{ \begin{array}{l} \pm \sqrt{529} \\ 4 \end{array} \right\} 23$$

$$\frac{6x}{23} = 43 \quad \frac{129}{129}$$

$$x = 9 \quad \text{the left} \quad \frac{129}{129}$$

$$x + y = 93 - \text{hand digit} \quad \text{and } y = 3$$

Prob. 26 page 165.

If a certain number be divided by the product of its 2 digits, the quotient will be 2. And if 27 be added to the number, the digits will be inverted. What is the number? Let  $x + y$  = the digits. Then by the conditions of the problem -  $\frac{10x + y}{xy} = 2 = 10x + y = 2xy$  and

$$* \text{ the value of this fraction} = y - 3$$

$$\frac{18y^2 - 153y - 270}{6y^2 - 51y - 90} = 8 \quad \text{transf. to } 18y^2 - 153y - 270 = 8(6y^2 - 51y - 90)$$

$$144y^2 - 1224y + 201 = 2160 + 2601$$

$$12y^2 - 51 + 21 = 441$$

$$y = \frac{21}{12} = 6 \quad \text{substituting 6 in}$$

$$\text{in 1st Eq. } x \text{ is for } x \text{ we have}$$

$$\text{equal to 3. So the Number sought is } 36.$$

$$\text{Solve for } x \text{ in the 2nd Eq. } 2xy + 27 = 11y + 3 \quad 5$$

$$\text{By last Eq. } x = \frac{11y - 3 - 27}{2y} \quad 6$$

$$\text{By making 2 & 6 equal } 11y - 3 - 27 = 9y - 27 \quad 7$$

$$\text{Clear fraction } \frac{2y}{2y} = 18y^2 - 96y \quad 8$$

$$99y - 27 - 243 = 18y^2 - 96y$$

Divide 90 into 4 such parts, that the  $\frac{1}{2}x+2$ , the  $\frac{2}{3}x$ , the  $\frac{3}{4}x$  by 2, & the fourth divided by 2, shall all be equal.

Let  $x, y, z$  be then of the parts, &  $90 = x+y+z$  the fourth.

By the conditions  $x+2=y-2$

$$\begin{aligned}
 x &= 18 + 2 = 20 & 2 - x+2 &= 2z \\
 y &= 22 - 2 = 20 & 3 - 2x &= 90 - x - y - z \} \text{ clearing fractions} \\
 z &= 10 \times 2 = 20 & 4 - 5z &= 90 - x - y - \} \text{ & transp.} - z \\
 w &= 40 \div 2 = 20 & 5 - 4z &= x + y \text{ multg. 2 Eq by 2. & addg. to the last} \\
 \hline
 90 & & 6 - 9z &= 90 \text{ addg. 2 last } \} \text{ multg. of 1st Equation.} \\
 & & 7 - z &= 10 \text{ from which all the others are easily found.} \\
 & & & \text{making the sum = 47.}
 \end{aligned}$$

Jan. 1845

Illustrated below

A Lady being asked her age - ans. that the number expressing it, consiste of two figures or digits - the left hand one of which is 5 less than the right hand one; and that 4/5 of the number is less than the product of the two digits by twice the left hand digit. What is her age? Let  $x$  equal the left hand &  $y$  the right hand digit.

Then  $x = 3y - 5$  But the locality of  $x$  gives a tenfold value to  $x$  hence  $x = 3y - 5$  But the locality of  $x$  gives a tenfold value hence the number sought  $= 10x + y$  and by the conditions  $4/5$  of  $(10x + y) + 2x = 725$

$$\text{that is } 4(10x + y) + 2x = 725$$

$$2 - \text{divided } 40x + 4y + 14x = 725 \text{ multg. by } 72$$

$$3 - 72^2 - 54x - 4y = 35x \quad \text{Subt } 2 \text{ from } 3^2$$

$$4 - 4y - 20 = +4x \quad \text{mult 1st Eq. by 4}$$

$$5 - 7x^2 - 54x - 20 = -312 \quad \text{add } 4 \times 5$$

$$6 - 7x^2 = 28x + 20 \quad \text{multg. by } 72 \text{ & transp.}$$

$$7 - 23x = 20 \quad \text{compg. squared}$$

$$196x^2 - 643x + 529 = 500 + 529 - \text{compg. squared}$$

$$560 \quad \text{Eq. 12 root}$$

$$8 - 23 + \sqrt{1089} \Big| 33$$

$$33$$

$$9 - x = 56 \div 14 = 4 \quad \{ \quad 63 \Big| 189$$

$$189$$

$$10 - x = 4 + 5 = 9 \quad \text{so } 49$$

is the number sought.

with \$100 dollars. 79

A Gentleman sent his Servant to purchase Cows at \$10 a head. Sheep at \$1 dollar a head & foals at one Shilling a head so that the number of Animals bought should be equal to the number of Dollars paid for them. What were the numbers of each sort?

It is obvious that the Sheep, costing a dollar a head, may be left out of the investigation. And then the question resolves itself into this - "What 2 numbers are those, whose sum is equal to the product of one of them multiplied by 10, added to the quotient of the other, divided by 8?" Let  $x$  = No. Cows. &  $y$  = No. foals

$$\text{Then } x+y = 10x + \frac{y}{8} \text{ according to the condition of the question.}$$

$$\begin{aligned} 8x + 8y &= 80x + y \text{ Transposing terms,} \\ 7y &= 72x \text{ Here the Coefficients designate the numbers sought} \\ &\text{That is } 7 \text{ Cows at } 10 = \$70 \text{ and} \\ \text{So if the Cows had been bought at } \$15 \text{ a head} & 72 \text{ foals at } 1/12 = 9 \\ \text{the foals at } 2/1 \text{ on the same conditions} & 72 \text{ Sheep of Cows } 2/1 \\ \text{Then } x+y = 15x + \frac{y}{4} \text{ where } x \text{ Cows is } 3 \times 15 = 45 & 72 \\ &\text{and of foals } 56 \div 4 = 14 \\ 4x + 4y &= 60x + y \text{ Animals } 59 = 59 \text{ Dollars} \\ 3y &= 56x \end{aligned}$$

**Corollary** - If any unknown quantity be multiplied by any number whatever, & be made or found equal to any other unknown quantity, also multiplied by any other number whatever - Then, universally, the value of the latter quantity will be equal to the Multiplier or Coefficient of the former quantity; and the value of the former quantity will be equal to the Multiplier or Coefficient of the latter: Or, the quantities will be <sup>equal</sup> multiples of those Coefficients. Thus if  $x = 5y$  then  $x = 5 + y = 1$ , &  $9y = 11y$  -  $x = 11 + y = 9$  or

$$\text{in the 1st. if } y \text{ had equaled } 15, \text{ then } x \text{ would have } 5 \times 15 = 75$$

It is plain that if  $x = 2, 5, 10$  or  $1000y$ , then  $x$  will be equal to  $2, 5, 10$  or a  $1000, y = 1$

From the Conditions of a problem, it can readily be determined whether the Coefficients be the true numbers sought, or whether the true numbers be some equal multiples of them - Thus in the 1st. equation Ex. 10 - page 72, where  $3x = 5y$  & when the Condition requires that the product of  $xy = 135$  the Multiplier  $\frac{3}{5}$  gives the true numbers - ~~for~~  $9 \times 15 = 135$

$$\begin{aligned} xy &= 135 \text{ the Multiplier } \frac{9}{5} = 15 \\ &\text{or } 225 : 81 : 36 : 4 : 1 \\ &144 : 36 : 4 : 1 \end{aligned}$$

March 21. 1844.

## Caseistry

Allow, that conscience rightly regulated,  
Supplies, conformity to rules, well stated:  
That every duty, scrupulously to fulfil,  
Claims strict obedience; to the enlightened will;  
Then, must it not unquestionably follow,  
That what's here so opposed, must clearly needs be 'hollow'?

Suppose obedience challenged to a strict command, that we should neither sit, lie, walk <sup>nor</sup> stand; or, the performance of some mental function should be enjoined, where clearly the injunction invades the undoubted province of the will; can it be urged, duty claims obedience still?

I then to work hard, & not grow faint nor weary.  
To endure most wanton wrongs, & yet feel cheery,  
To love what's hateful, or to eschew what's good,  
Are, or may become duties, not to be withheld;  
Provided, an ordinance, be therefor assigned  
Rooted divine or papal, to sooth the plaint mind.  
Commands, like these, so abhorrent to our natures!  
Can they ought else be, than very small potations?

Suppose again our firm belief is enjoined  
of something, not proved, nor can be, nor defined.  
How, what's called God, in times, now grown remote,  
Timeline was with man, & to him shake & wrote:  
Once in particular, ~~bared~~ his backides to Moses,  
Hid in a cleft, as by it pass'd, he goes.

And often every now & then, would stray,  
To visit man, eat kid, & spend an holiday,  
not, that all men alike, <sup>kindly</sup> visits share'd;  
On some he smiled; on others fiercely glared.  
Just merely by this means or that, to indicate  
That God, like man can love as well as hate.

But rather ~~now~~ cherishing a long pondered notion  
That his true glory turned on man's devotion:  
and that could the best find a model man or nation  
I would endure that giving thro' his wide creation.  
Hence far & near looked round to spied in Canaan  
A man called Abram <sup>having</sup> ~~the~~ whose wife was barren

so they pondered well the matter, till they clearly could divine,  
it was not a royal heir, they'd get word of Shep & King.

One allowance being made for the times as they were, then  
general honesty prevailing, But few left handed men.

Thus easily Abram found it, Sister for wife comonuted.

To come it over there kings, at the expense of being comonuted. He He He

What is the true & legitimate import of the term, Religion? Does it denote a tie, bond, or obligation duty & something that ought & must be done? Is it not applicable to all moral Beings, universally? and is not precisely synonymous with duty? It seems probable that its primitive meaning was more limited simple and precise than its present, and that it was used only in a physical sense as to bind a bundle, or to tie with a cord: and that afterwards when a word was needed to denote the idea, of what men must or ought to, do as moral Beings, this word came to be used for this purpose also; and thus like many other words, through the poverty of language acquired a two-fold meaning. However this may have been, is perhaps of comparatively little moment now; otherwise than as showing how the original meaning of words may gradually & insensibly become modified & essentially perverted by popular use & acceptance.

The word Religio amongst the ancient Romans, from whose language this word is obviously derived denoted certain rites & ceremonies to be observed & performed in honor of their gods: some of these consisted in assembling together in magnificent temples, & there publicly addressing their prayers, & in singing sacred songs to the praise & glory of their gods: whilst other services consisted in taking care of the sacred chickens, watching the flight of birds, inspecting the entrails of slaughtered animals offered in sacrifice, & in interpreting prodigies & omens: all which were done by the Priests, in order to ascertain the will of the gods & thereby secure their favour. The feelings & emotions which gave birth to these rites, & which accompanied the performance of them were uniformly characterized by great gravity veneration & awe.

This was religion amongst the Romans: and amongst other contemporary nations, other observances, also purporting to be religious, were greatly diversified. But the question is, what is religion now? assuming that the word denotes ~~what~~ the idea of what men must or ought to do; it is plain that the question involves an inquiry concerning the intellectual & moral character & constitution of man: and the method of con-

84}.-conducting such an inquiry or investigation must obviously be very much as tho' the inquiry were "what is this mineral plant or animal good for?" and what use was it intended, or is it fit, to subserve? The true answer to a question of this sort, must depend on a right understanding of the properties & qualities, powers & faculties that belong respectively to these several subjects. Just so must the true answer, to the question "what is religion" depend on a right understanding of the moral constitution of man.

To say - man is a moral being without having clear & distinct ideas of what is meant by the words "good & Evil; right & wrong" is sheer verbiage. Then it is of the first importance to get clear & well settled ideas of these several terms. We certainly can have no definite conception of a moral Being without distinct & determinate ideas of the chief elements that make him such.

The magnetic needle is affected by iron. This we know. The motion produced by it, is purely physical, & is ascribed to attraction. But what attraction is, or that power which is thus denominated, we know nothing.

In regard to moral Beings, & moral actions, is not our knowledge in some degree alike circumscribed? We certainly know only that such Beings as we are, are capable of acquiring knowledge of enjoying happiness, & of suffering misery; are endowed with imagination, faculties & sundry passions, affections, & emotions. These several capacities, faculties & endowments we suppose characterize a moral Being (theoretically); and also, practically when duly developed & matured by right training & education.

But he, only is a moral Being strictly considered, who does <sup>only</sup> what he ought. But this, according to the views now advocated, makes him also a religious Being: For being tied firmly, & put under bonds by his native faculties & endowments; he can perform no action at all, but in as far as he is thereby prompted; and if he do not act morally & religiously when he does what he sincerely considers right, it would seem to follow, that religion is involved in inextricable obscurity. Again motives necessarily precede actions; for without them, there could be none. But what are motives? Clearly - whatever causes or induces motion. But since the <sup>outer</sup> world is a mingled mass of good & evil, & wrought beside - with this qualification viz. all good if rightly used; or, all evil, if abused. And since also

Moral & Religious Beings are, by their native endowments, exactly adapted to the external world, with intellectual faculties to discriminate between the good & evil, & with a correspondent faculty of being intensely affected, <sup>as they are or should</sup> ~~as they are or should~~ <sup>rationally & congenitally</sup> by it: (the world) It seems difficult, nay, impossible, that there can be any other motives to voluntary human actions, than such as arise from considerations, ~~of present & remote~~, of good & evil either present or remote. If the attempt to teach one, blind from his birth, the art of ~~Musick~~, or another, deaf, that of Music, be rightly deemed preposterous, because of the want of those faculties, on which success in these arts, essentially depends: Can it be any less so, to attempt to teach Matters & things appertaining to a Spirit world, to such as are wanting in all those faculties & man, necessary to enable to test the truth, & appreciate the worth, of what may be thus taught?

If human Beings are incapable of learning ~~those~~ arts, in which the instincts of some of the lower animals enable them to excel; is it not the height of absurdity to attempt to indoctrinate them, in those arts, purisists, scenes of enjoyment, & suffering, which are supposed to be apposite to an order of spiritual existences in a world, unknown?

Now let us consider, what such Beings as we are, can, must & will ~~ought to do~~; for, since religion, whatever may be its true import, must necessarily be included within this category; we shall not fail to detect that import, provided, we can clearly & satisfactorily determine what sorts of actions necessarily fall within the scope of the human faculties.

I suppose it will be conceded, by all, that man is endowed with the faculty of discriminating between right & wrong; and as this conception is independent & regardless of creeds & localities - it must be held universally true of all men, of sane minds: it will be further conceded, that all men constitutionally & by nature are characteristically alike; & yet marked by individual peculiarities. Now notwithstanding this unanimity of sentiment, in regard to this discriminating faculty: there is a no less marked contrariety amongst what are considered cultivated minds, in regard to what constitutes right & wrong, & what those elements are, betwixt which the moral faculty discriminates: and here is the grand difficulty to be wrestled with; nay, the only one - religion or morality, out of the ~~greatest~~ all other human actions, sink into comparative insignificance.

86] Beyond all question, if man were bereft of the capacity for happiness - it is inconceivable, that, the the whole universe should resound with songs of joy; or the howlings of despair of other beings. They would fall alike on his ear, with the same passionless indifference.

Hence it is evident that human happiness is the "primum mobile," the first & deepest principle in the human constitution, the sole end of all human effort.

Man, then, can distinguish good from evil: and he makes this distinction, not so much voluntarily, & because he chooses to do so, but rather necessarily, & because he cannot do otherwise. It does not rest with him, nor at <sup>all</sup> depend on his will, that the various objects of sense minister to his happiness, or on the contrary, to his misery. The true reason or cause lies further back, & admits of no other explanation, than that such is the primitive constitution of things, the established <sup>order</sup> of nature. Man is provided with no other means for finding out these natural relations, nor of their availableness to happiness, than that of knowledge, derived from observation & experience.

And just so far & so fast as his knowledge advances, to the same extent does he devote himself to the pursuit of what he esteem good, and to the avoidance of evil: Now, thus far man acts as he <sup>must</sup> can be. Can he avoid preferring good mutton & cabbage as articles of diet, to skunk cabbages & wild turnips - a bowl of strawberries & cream, to one of curr'd rotten eggs? It is by precisely by the same means - that is - by experience that we arrive at the knowledge of right & wrong in human actions, & precisely for the same reason that we approve the one, & condemn the other, that is - because of their respective tendencies to subserve, or subvert human happiness. Man in the outset, finds himself in a state of utter destitution, both of ability to do <sup>any</sup> thing, & of all knowledge of the <sup>means</sup> requisite for his subsistence & enjoyment. He has been unconsciously awakened into life, & introduced into a world, full of incitements to his activity, & in such order as his active faculties shall be <sup>more</sup> developed - Thus far, he has been exclusively in the hands, as it were, of the Potter, & wholly subject to the guidance of invisible principles within, combined with the influence of circumstances exterior to himself: And until it can be shown how & when he became emancipated

from the government of these principles & influences; I see not why <sup>87</sup> it should not be admitted, that it is continued with unabated energy thro' the whole period of life. It is not intended, by any man, to either deny or ~~over~~<sup>shun</sup> the responsibility, of which all are conscious; but simply to enquire after, & to ascertain its nature & extent (taking it for granted, that religion & accountability are conservative & corrective) and keeping in view also, that we are now speaking of such minds only as are supposed to be ordinarily enlightened. Now what are the facts & conceded truths, in every case of a wounded conscience? Is it not clear that some act has been done, or resolved on, which, at the moment, viewed under false lights, promised to be beneficent; but which, when subsequently reviewed under better lights, the understanding disapproves? And hence the mortal anguish, termed compunctions visitings of a violated conscience? And is not Repentance the natural consequence of sober second thought, & a dispassionate review & grave reflection - the very fact of an unquiet conscience, which constitutes the chief proof of the existence of a religious faculty, necessarily involves the idea, that conscience is itself the rule & measure of religious obligation: And that whilst the conscience is at ease, the demands of religion are satisfied. But conscience is only the felt approval or disapproval of the decision of the understanding: And since, as before shown, nothing but the consideration of good & evil, either present or remote can possibly affect or in any way modify such decision; it seems to follow that the whole of responsibility is resolvable into the knowledge of good & evil as the indispensable means of attaining the chief end of human existence.

If man be as commonly supposed, wholly & absolutely dependent: How & for what can he be considered justly responsible at all, especially to that Power on which he is dependent? Does not the idea of responsibility involve that of absolute freedom? the ideas of absolute dependence & accountability who can reconcile? Is it possible for us to conceive of a Potter, who should instead of a gallonging, that he had made, that it should stretch itself to the capacity of a barrel - and that he should dash it to pieces for its disobedience? Is it at all more conceivable, that a sensitive & intellectual ~~piece~~<sup>being</sup> of machinery can enlarge, diminish, or in any other way modify its powers & capacities, than can that of a jug? It is obvious, that the idea here involved is none other, than that of self creation: For to suppose that

a created Being exercising functions, other than such as properly belonged to, & were within the scope of its primitive endowment, is to suppose him acting thus far in spite of constitutional restrictions, independently & on his "own hook". But to avoid further entanglement in the meshes of liberty & necessity, let us return to the question of responsibility, regarded in such light as renders it at all intelligible: And here is it not obvious that the power or principle, to which we are responsible, is either if not a part of ourselves? Is not the whole process of wrong-doing, of reflecting on it, of persistence therof, of carefully guarding against a repetition of the evil act, & of mental quiet & security that succeeds, wholly & exclusively limited to ourselves? We are certainly not cognizant that any Being exterior to ourselves, has any thing to do with any part of this process: And inasmuch as this process is to be met with amongst all sorts of men, irrespective of their superstitions exceeds, & as well amongst those who worship the Devil as those who worship God; we soon compelled to the conclusion, that the whole theory of accountability is resolvable into the subtle & mysterious operations of our own minds. The idea here suggested must not be understood either to exclude, or to detract from the doctrine of the Divine Agency in the absolute government of the Universe.

The Constitution of the world as we find it, & the general Providence, or Order of Nature by which it is sustained are considered as affording ~~so affording~~ us all the light we possess, & all that is needful to enable us to live in such a manner, as to insure the greatest glory to God, & the greatest amount of happiness to man: This last however is that with which we are at present concerned - the only legitimate end of all scientific research. The following unquestioned facts, <sup>the</sup> considerations inseparable from them, seem to me to have a direct bearing upon the proposition here stated: and to be conclusive as to its truth. The first of these facts, is the actual & real existence of a Code of laws (supposed for the most part, to have God for their Author; & by so much the better if the supposition be true) called "the Laws of nature, which are constant & immutable in their operation in their operation & universal in their scope & application; whose irresistible energy and authority are embodied in principles, which so pervade & vivify all forms & conditions of being, that no event, great or small, does or can take

place, but by thro' their Agencies. Now the first prominent consideration, inseparable from this code, is, that the whole circle of modern science is exclusively based upon its real existence & supreme energy: and so much so, that no event ~~now~~ transpires, worthy the attention of thinking minds, which is not spontaneously regarded as an inevitable sequence in the Order of nature: And such is the degree of confidence among such minds, that whether the event can be traced to, or clearly connected with its supposed antecedent or not, it matters not, it is still regarded as a natural event; and that the principle that gave birth to it, as having thus far, eluded observation. Such amongst the yet unexplained occurrences, may be reckoned the "Aurora Borealis", Aerolites, polarity of the Magnetic Needles, the rotatory movement of a speck of Camphor, dropped into a basin of water, its immediate state of quiescence by means of a single drop of any aromatic fluid &c &c.

There is another consideration, that like Aaron's rod seems to swallow all the rest. It is that of the moral & intellectual Constitution of man, viewed in connexion with the Constitution of things. Here we find ourselves introduced into a world, teeming with good & evil, promiscuously intermingled; & subject to no prohibition as to appropriation & enjoyment, save that of knowledge, previously to be elaborated by dint of observation & experience. We find herein precisely such incitements to activity, as are requisite to awaken & call forth our dormant mental powers, without which we should remain at best, but doubtful competitors for precedence with the OURANG-OUTANG. Seeing that such beings as we are, can act at all, only by the impulse of motives, we are here supplied with a key to their arcana, the whole machinery of human actions is hereby revealed. The Desire of Happiness incorporated, or provided for in the Constitution of Man; and the KNOWLEDGE of GOOD & EVIL, the indispensable MEANS of gratifying that desire. These much may be regarded as clearly indicated by the established Order of Nature.

<sup>1</sup> A brief recapitulation of the foregoing (let it be confessed disultory & ill arranged) facts, it is hoped, will render more perspicuous & decided in what true religion consists — and in the first place, the idea of the tie or bond, supposed to be implied by the force of the term, is to be found ONLY in the stringent and unyielding force of the laws of Nature. And in the next place, these laws as arbitrarily impel us to seek after God as a means of

90 Happiness, as they do, inert matter, to obey the force of gravitation; or a lower animal or vegetable, its instincts.

We enjoy or possess perfect physical liberty, within the limits prescribed to our physical powers, to do whatsoever we will; & yet we are absolutely constrained to will whatsoever shall appear to our understandings, at the moment of willing (all things considered, particularly present & remote enjoyment) as the preferable good.

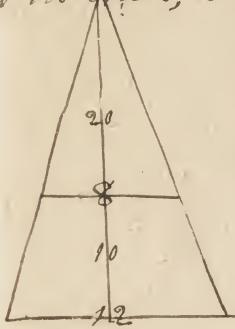

The Order of Nature or Providence affords abundant means for promoting human happiness; the chief of which is knowledge. Without knowledge, all other means are as likely to be converted into curses as blessings. The incentives to knowledge, are Desires & wants.

True Religion enjoins obedience to the laws & institutions of Nature; and implies such provision of their operation, as to enable us in some degree to modify ~~control~~ <sup>great</sup> operation.

A Frustum of a Cone is ten feet in length, & its bases 12 feet <sup>113</sup> & 8 feet in diameter. Where shall it be cut off by a section parallel to its ends, so that the parts shall be equal to each other?

$$12^2 \times .7854 \times 10 = 1130.9760 - 335.1040 \stackrel{2)}{=} 795.8720 = 397.9360$$

$$8^2 \times .7854 \times 6 \frac{2}{3} = 335.1040 + 397.9360 = 733.0400$$

$$335.1040 : 733.0400 : 20 : 17500 \text{ the cube root of which is } 125.962744 \\ \text{from } 30 \text{ leaves } 4.03725534 \text{ multiplied by } \\ \frac{1}{12} \text{ gives } 48.4470636 \text{ subtracted from } \\ 12.0$$

1268 a plank 12 feet long - 12 inches wide at one end & 8 inches at the other, is required to be divided into 2 equal parts, by a line parallel to its ends - what is the length of each section - and the width of the plank at the point of severance?

It is easily found that if the plank were divided midway from its ends - one part would contain 5.5 square feet, & the other 4.5. Hence it is conceived that this ratio, between the areas, must be the ratio between the lengths of the sections. Thus - putting  $x$  for the longer section,  $12 - x$  for the shorter; we have the proportion  $x:12-x::5.5:4.5$

The number of square inches in the ~~plank~~  $\frac{4.5x}{5.5x} = \frac{6.0}{6.6} = 79.2$  inches - the longer is 144.0  $\frac{10.0x}{10.0x} = 66.0$  and  $x = 6.6 = 79.2$  inches - the shorter  $\frac{64.8}{64.8} = 72$  inches

What is the true & legitimate import of the term "Religion"? Does it denote a tie, bond, obligation or duty—something <sup>universally</sup> that ought, that must be done? Is it not applicable to all moral Beings: And is it not synonymous with duty? It seems probable that its primitive meaning was more limited, simple & precise, than its present, and that it was employed only in a physical sense—as to bind a bundle, or to tie with a cord the bird that afterwards, when a wood was needed to divide the idea of what men must or ought to do, this word came to be used for this purpose also, & like many other words thro' the poverty of language, acquired a double meaning: However this may have been, perhaps, is of comparatively little moment now, otherwise than as showing how the original meaning of words may gradually & insensibly become modified & essentially, reported by popular use & acceptance.

The word "religio" amongst the Ancient Romans, from whose language this term is obviously borrowed, denoted certain rites & ceremonies to be observed & performed in honour of their gods: Some of which consisted in assembling together in splendid temples, in addressing their prayers, & in singing hymns to them; whilst other services consisted in taking care of the sacred chickens, watching the flight of birds, ~~in~~ interpreting the <sup>prodigies &</sup> traits of slaughtered animals offered in sacrifice, & in interpreting omens; all which were done by the Priests, in order to ascertain the will of the gods & to secure their favour. The feelings & emotions which gave birth to those rites, & which accompanied their performance were characterised by gravity, fear, reverence, veneration & awe.

This was religion amongst the Romans. Amongst other contemporary nations, other rites, ceremonies & observances, also purporting to be religious, were greatly diversified. But the question is, what is, & what constitutes religion now? Knowing that it is a term, used to denote the idea of what men must, or ought to, do; it is plain that the question <sup>an inquiry</sup> concerning the intellectual & moral character & constitution of man; What he can, must, ought to do, considered as a <sup>intellectual</sup> Moral & Intellectual Being. And the method

132] of conducting such an investigation must, obviously be very much as tho' the inquiry were - What is this, or that mineral or plant, good for? or what use was it intended; or, is it fit to subscribe? Or, what can & will this or that kind of lower animal, do? and what useful purposes can they be made subservient? The true answer to any such questions must depend on a right understanding of the properties & qualities, powers & faculties, that belong respectively to these several subjects. First, so, must the true answer to the question - What is Religion? depend on a right understanding of the moral constitution of man.

To say - man is a moral Being - without having clear & distinct ideas of what is meant by the words "good & evil", "right & wrong", is mere verbiage. Hence, it is of the first importance to get clear & well settled ideas of these several terms. We certainly can have no definite conception of a moral Being without distinct & determinate ideas of the chief elements, that make him such. The magnetic needle is affected by iron. This we know. The motion produced is purely physical, & is designated by the word Attraction. But what attraction is, or that power which is thus denominated, we know nothing. This is the limit of our knowledge; and our reason does not enable us to go beyond it.

In regard to a moral being; is not our knowledge in some degree alike circumscribed? We certainly know only that beings like ourselves are capable of knowledge, & happiness & misery. Beyond this (our capacities for knowledge & happiness) can we, do we know any thing, of ourselves? In what these capacities consist, we are as much in the dark, as we are in regard to gravitation & electricity. In addition to these capacities, we may add - that we are endowed with powers of imagination, with various affections, & peculiar emotions. These several capacities, we suppose, characterize a moral Being: Or, rather, are essential to such a being; and really constitute a moral Being, only, when duly educated & developed. For he only, who does what he ought, can justly be regarded as moral or religious. To draw forth, to nourish, to invigorate and to train these several faculties, to a state of healthful maturity, constitute the sole purpose, the only end of education.

If the attempt to teach one, blind from his birth, the art of painting; or another, ~~that~~ that of music, be rightly deemed proportionate, because of the want of those faculties on which success in these arts depends; can it be any less so, to attempt to teach matter, & things, <sup>of</sup> pertaining

138

to a spirit world, to such as are wanting in all those faculties, necessary to enable them to test the trouble, & to appreciate the worth of what may be thus taught? Of human beings are incapable of learning those arts, in which the instincts of the lower animals enable them to excel; is it not the height of absurdity to attempt to indoctrinate them in those arts, pursuits, scenes of enjoyment or suffering, which are supposed to be opposite to an order of spiritual existences in a world unknown?

Let us then proceed to consider what men, endowed as they are, can, will, & ought to, do: since religion, whatever may be its true import, must necessarily be included within this category; we shall not fail to detect that import, provided we can clearly & satisfactorily determine what actions necessarily fall within the scope of the human faculties. How much or little soever our moral & religious conduct may be affected by the action of the heart & lungs; & those movements, & continual transformations in the material parts of our bodies, which properly belong to the vital economy; I shall omit for the present, to notice, because they are powers manifestly distinct from, & independent of ourselves & therefore not ~~extending~~ within the purview of the present inquiry.

It is conceded by all, that man is endowed with the faculty of discriminating between right & wrong: And this conception is wholly independent & regardless of creeds & localities. It may hence be regarded as true of all men universally; that is—of all men of sane minds. It is also conceded, that all men are constitutionally & by nature, alike in their general characteristics; tho' marked by individual peculiarities. And yet notwithstanding this, unanimity of sentiment in regard to the discriminating faculty; there is a no less marked contrariety amongst what are considered cultivated minds, in regard to what constitutes right & wrong & ~~what are~~ those elements, between which the moral faculty discriminates.

Now is there any other conceivable way of adjusting this conflict of opinions, than <sup>by</sup> such means as are derivable from the knowledge of God & Evil? If not, then it would seem, that good & evil are the primary & fundamental principles which constitute the foundation of right & wrong, of morals, of duty & of religion & of human happiness; for if the capacity for happiness & misery be supposed to be abstracted from man; it is utterly inconceivable, that there could be <sup>any</sup> ~~such~~ thing left to tie or attach him to existence: So that, whether the Universe resounded with songs of joy, or, with the howlings of despair, they would fall upon his ear with the same passive indifference. } see page 128.

 \end{array}$$

The sum of any two numbers <sup>(whose diff. is one)</sup> is equal to the diff. of their squares and the sum of any two numbers, multiplied by their diff. is equal to the difference of their Squares.

Twice the sum of the squares of any two numbers exceeds the square of their sum, by the square of their difference.

Problems - by Thomas Burleson 2<sup>d</sup> June 13<sup>th</sup> 1829

1.

If the square root of any number be multiplied by 2. 3. 4 &c. the product will be equal to the square root of ~~the product of~~ said number multiplied by the square of said multiplier - -

Ex- Let 200 be the number & 10 its square root multiplied by  $\frac{4}{40}$  which is equal to the square root of the product of  $100 \times 16 = \sqrt{1600} = 40$  -

Prob. 2<sup>d</sup> By Division - same - reversed -

Prob. 3<sup>d</sup>

If any number whose square root is involved with itself is required - Rule- Take the square root by sub. last just fig'de

Ex- Let the square of a number added to itself be . 56 - what is that num?  $\frac{56}{48} = 49$  Answer

(added to)

If any number, (with) the square root of 2. 3. 4 &c times its product, be divided by 2. 3. 4 &c the quotient will be the number with its root (extracted) multiplied by 2. 3. 4 &c will give the root required - or number required -

Ex. A man being asked how many dollars he had in his pocket and if the number be multiplied by 4 - & the square root of the product be added to the number it will make 440 -

Let 440 be divided by 4  
110 / 10 greatest by 4 to number -

$$\begin{array}{r} 4 \overline{) 1600} \\ 16 \overline{) 00} \\ 00 \end{array} \quad \begin{array}{r} \sqrt{440} = 440 - x \\ 440 - x \\ \hline 172 - 144 \\ 28 - 28 \\ 0 \end{array} \quad \begin{array}{r} 20 \cdot 16 \\ 4 \\ \hline 16 \end{array}$$

$440 = 193600 - x^2$

40 root added to 400 = 440  
4 400 the number

$$4x^2 - 3536x + 781456 = 174400 + 781456$$

$$2x = 884 + \sqrt{7056} \quad | 84$$

$$x = \frac{800 \div 2}{164} \quad | 656$$

$$x = 400 \quad \underline{\text{The Number}}$$

$$\begin{array}{r} 7056 \\ 64 \\ \hline 656 \\ 64 \\ \hline 16 \end{array}$$

### Prob. 5.<sup>tr</sup>

When any Number with 2. 3. 4 &c times its square root is given to find its root or Number - Rule

Divide the given Number by the square of the 2. 3. 4. &c by which it has been increased & the quotient will be the sum ther with its root involved, which root, multiplied by said square will give the root required

Ex. 1.

### Prob. 6.<sup>tr</sup>

To form a Square within any given Number, that shall be equal to  $\frac{1}{2}, \frac{1}{3}, \frac{1}{4}, \text{ &c}$  of the Number - Rule

Multiply the Whole Number by 2. 3. 4. &c then extract the Square Root, by adding the last quotient <sup>fig. 6. by Prob. 3<sup>rd</sup> which root divided by said Multiplier gives the square required.</sup>

The product of the sum & difference of any two numbers, is equal to the difference of their squares. And if such numbers have a difference of but one the sum of any two numbers multiplied by their difference will be equal to the difference of their squares. Aug. 6. if two to twice their sum: iff 3. to 5 times & so on &c. 1537

Twice the sum of the squares of any two numbers, exceeds the square of their sum by the square of their difference.

The sum of the squares of any two numbers exceeds double their product by the square of their difference. Anti Mat. & Abra. 2

The square of the leg of any right angled triangle exceeds the square of the hypothenuse, by four times the area of the triangle.

A tree one hundred feet high stands by the side of a stream fifty feet wide - How far from its top must it be cut off so that it will just reach the opposite bank?

Rule.

Divide  $\frac{1}{2}$  the sum of the squares (of the height of the tree & the breadth of the stream) by the height of the tree - Or, the whole sum, by twice the height - The quotient will be the answer. The difference between the  $\frac{1}{2}$  sum & the square of the height of the tree, divided by the height, will give the length of the shadow.

By Algebra

Let  $x$  = Dist from top to the top of stream  
 Then  $x$  being the height of a right angled triangle  
 $x^2$  = the square of the 2 sides = 112  
 $60 + 100 - x$  - this last step and gives  
 $10000 - 200x + x^2 = 60$  being 3600  
 $x^2 = 13600 - 200x + x^2$  Expanding on the right  
 $4$  terms  $x = 200$   
 $\frac{200x}{x} = \frac{13600}{x} = 13600 \div 200 = 68$  the height

Theorem.

The Hypotenuse in any right angle triangle is equal to the square of its base, together with the square of the sum of its other leg & itself, divided by twice said sum. Or, It is equal to half the sum of the squares of the base & of its other leg together with itself, divided by the sum of said other leg & itself.

$2^2$

Half the sum of any two squares, divided by a side of the greater, ~~will be~~ equal to the Hypotenuse of a right angle triangle, whose base is a side of the less.
